

Sajid Mujibur Rehman

JUNIOR AI/ML ENGINEER | MACHINE LEARNING • COMPUTER VISION

M.Tech graduate in Artificial Intelligence and Machine Learning with project and internship experience in model development, healthcare-data preprocessing, model evaluation, and causal analysis research. Technical areas include Python, machine learning, deep learning, computer vision, NLP/LLM concepts, data analysis, and API development. Seeking a junior AI/ML opportunity where analytical problem-solving and disciplined evaluation can support model development.

EDUCATION

M.Tech in Artificial Intelligence and Machine Learning

Ramaiah University of Applied Science

12/2023 - 12/2025 | Bangalore, India | 8.85(CGPA)

B.E in Computer Science and Engineering

Anjuman Institute of Technology and Management

08/2019 - 05/2023 | Bhatkal, India | 7.8 (CGPA)

WORK EXPERIENCE

Student Researcher

M.S. Ramaiah University of Applied Sciences

01/2025 - 09/2025 | Bangalore, India

Accomplishments / Tasks

- Developed a causal analysis framework for evaluating sustainability indicators and outcomes in building construction projects using Pearl's causal Inference framework, Graphical Causal Model (GCMs) and Structural Causal Model (SCMs).
- Analyzed survey data from 418 building-construction stakeholders and worked with 56 sustainability indicators covering ecological, economic, and social dimensions.
- Performed interventional and counterfactual analysis to quantify causal effects of construction phases on sustainability outcomes and derived closed-form expressions for average counterfactual outcomes.
- Evaluated causal relationships across construction phases, identifying the strongest estimated sustainability effect during the Construction phase (0.9787), followed by Operation (0.9104) and Demolition (0.8905).

Contact Person

Dr. N D Gangadhar | gangadhar.cs.et@msruas.ac.in

SKILLS

- Programming: Python, basic SQL, Bash, shell scripting
- Machine learning: supervised and unsupervised learning, classification, regression, time-series forecasting, model evaluation
- Deep learning and computer vision: ANN, CNN, LSTM, Vision Transformers (ViT), PyTorch, TensorFlow, Keras
- Generative AI and NLP concepts: large language models (LLMs), prompt engineering, retrieval-augmented generation (RAG), semantic search, text generation, text classification, OpenAI API integration
- Data analysis: Pandas, NumPy, EDA, Matplotlib, Seaborn, Plotly, Tableau
- Tools and frameworks: scikit-learn, FastAPI, Git, GitHub, Jupyter Notebook, VS Code

PROJECTS

Efficient AI Image Classification with PyTorch

Personal Project

04/2026 - 06/2026

Tasks / Achievements

- Built an image-classification pipeline using the Food-101 dataset, containing 101,000 images across 101 food categories.
- Built and trained a Vision Transformer (ViT) pipeline with image preprocessing, augmentation, batch loading, validation, and evaluation.
- Implemented Automatic Mixed Precision (AMP) and compared FP32 and mixed-precision training using training time and classification accuracy.
